

## ELECTRONICS RECYCLING

### It's the Law!

As many of you are aware, since July 2001, due to environmental and health concerns, it has been illegal for commercial entities to send electronics (monitors, computers, cell phones, laptops, televisions, etc.) to the landfill.

- *Colorado Department of Public Health & Environment Regulation Hazardous Waste/Solid Waste-1007(3) Part 273*

**Lifespan Technologies**, in cooperation with Curbside Recycling Indefinitely, Inc., offers legal and environmentally proper disposal of computer components and other electronic devices. Please call Lifespan at **256-0182** to schedule an appointment.

#### **MONITORS CONTAIN 5 - 8 LBS. OF LEAD!!**

Electronic Recycling is the recycling of obsolete electronics. This is when an electronic component is deemed to be at the end of its life and economically worthless. The recycling process occurs when the electronic component is dismantled into its core materials - glass, metal, and plastic. Examples of components often recycled are computer hardware, telecommunication devices, components with complex circuitry and other electronic office equipment such as copy machines and security systems. The concept that a program or event can accept anything with a cord attached to it can cause problems because the possibility of receiving white goods and miscellaneous items such as curling irons can occur.

We at GJCRI believe that legal and environmental disposal of your electronic waste is a necessary and proper action. We ship all electronics to a certified "Universal Waste Handler", who disassembles the equipment to the core material (plastic, glass, metals) which are then packaged by type for sale and recycled back into the industry.

Curbside Recycling Indefinitely, Inc. is a locally owned and operated company providing residential & business recycling service in Grand Junction since 1989.
